Introduction

Welcome to DHI License Manager 2023

The DHI License Manager is used to enable the MIKE software products to run in Internet, network or personal mode.

- In Internet and (local) network mode all the users in the organization share a pool of floating licenses managed by the DHI License Manager. The DHI License Manager is installed on a central server where it acts as an 'accountant' keeping track of the number of concurrent users by checking the available licenses in and out of the shared pool of licenses. In this way, each license is utilized more efficiently than in local mode as soon as a license is released by one user, it is available for another user on the network. The MIKE software products themselves still reside entirely on the client machines. No application processing is done on the server.
 - An offline mode enables users of MIKE software who are using the Internet license server to be able to use the software up to 14 days without internet connection to the internet license server.
- In personal mode the license is reserved for the machine for which it is installed. For a personal installation the license manager is still used though in personal mode and hence the license cannot float within the organization. Please note that in personal mode the DHI License Manager needs to be installed separately.

Please Note that when using the local or network license option then

- all licensed applications included in MIKE 2023 require a 2023 version of the DHI License Manager.
- a new license file format (file extension dhilic2) has been introduced with MIKE 2022 and these license files can only
 be used together with a DHI License Manager 2022.

System requirements

Operating systems

Fully supported Windows operating systems *	Windows 11 Pro, version 22H2 (64 bit) Windows 10 Pro, version 22H2 (64 bit) Windows Server 2022, version 21H2 Windows Server 2019 Standard, version 1809
Non-supported but partially tested operating systems **	Windows Server 2016 Standard, version 1607

- * Fully supported operating systems are systems that have been tested in accordance with MIKE's Quality Assurance procedures and where warranty and software maintenance agreement conditions apply.
- ** Non-supported but partially tested operating systems are systems, which are not officially supported by the MIKE software products. These operating systems have only undergone very limited testing for the purpose of MIKE software, but the software and key features are likely to work. Installation of MIKE software on a non-supported operating system is done so at the user's own risk. The MIKE software warranty and software maintenance agreement conditions do not apply for unsupported operating systems and DHI is under no obligation to provide assistance or troubleshooting for cases where the software is being used on a non-supported operating system.

Please note that when running a fully supported operating system as a 'guest operating system' on a virtualization platform, it is automatically downgraded to a non-supported operating system under the conditions provided above.

Minimum hardware/software requirements

Processor	compatible with x64 instruction set, 2.2 GHz or higher
Memory (RAM)	4 GB or higher *
Storage	64 GB or higher *
Display	resolution 1024 x 720 (High-Definition) or higher, 24-bit color (true color)
Graphics adapter	64 MB RAM (256 MB RAM or higher recommended), 32-bit true color
Software requirements	Microsoft .NET Framework 4.7.2 or higher

^{*} The actual required amount of memory and disk space depend on the usage (application, model setup, size of data files etc.)

Installation

Please notice that there are no special requirements to the network when using the DHI License Manager. The DHI License Management tool uses TCP/IP for communication across the network.

To install DHI License Manager (either locally or on a network server), please go to the 'DHI License Manager' product folder and execute the setup.exe file either on the MIKE 2023 USB or from the downloaded, un-zipped installation files. Press the 'Install' button to begin installation.

The setup program will automatically install all necessary files and folders on your computer. Additionally, an entry is created in the Start Menu for DHI License Management.

For details on installation and configuration of the DHI License Management Tool, please refer to the guide here.

License file and dongle

To use MIKE Software in licensed mode it is required that you have a valid license and a corresponding hardware dongle.

Please follow these steps to install a license file:

- 1. You can retrieve the MIKE software license file (License.dhilic) via the Internet. This requires a working Internet connection and a valid e-mail address. The license file can be retrieved in two ways:
 - a. During installation of the DHI License Manager
 - After installation of the DHI License Manager, by launching the DHI License Updater under DHI License Administration through the Windows Start menu
- 2. To retrieve your license file during installation of DHI License Manager, select 'Internet' when prompted to 'Select retrieval method for license file'. Insert your dongle and continue the installation. When the installation has been completed, the DHI License Updater will be launched. Follow the on-screen instructions.
- 3. To update your license file using the License Updater, simply launch the DHI License Updater and follow the onscreen instructions.
- 4. Alternatively, the license file can be installed manually through the DHI License Management tool. Further information can be found in this guide: https://manuals.mikepoweredbydhi.help/2023/General/DHILicenseManagement.pdf

Product invocation

For detailed information on how to configure the license management settings, please refer to the DHI License Manager Guide that can be found here: https://manuals.mikepoweredbydhi.help/2023/General/DHILicenseManagement.pdf

Support

For general support, please refer to our Customer Care Portal.

If you experience any difficulties, or if you have questions, please contact our Customer Care team at mike@dhigroup.com.

You can also contact your local Customer Care team for support in your local language. A list can be accessed from here.

New features and fixed issues

Every new release of DHI License Manager consists of new modules, new features and/or corrections to problems or significant inconsistencies discovered in previous releases. Please find below short descriptions of the most significant news in DHI License Manager.

Release 2023

New features and improvements

Module/type	Error/Inconvenience
DHI License Manager	DHI License Updater now using https

MIKE Powered by DHI

DHI License Manager	In the DHI License Management application the user now gets an error message for remote import when then user hasn't got admin rights or has aborted the license file import
DHI License Manager	In the DHI License Management application step forward and step backward in licenses tab (Network license) works correctly when filter is active in server tab. Stepping beyond start and end of list is no longer possible.
DHI License Manager	On computers with dongles the user now gets an error message if they try to set up a configuration for a local license server on another computer.
DHI License Manager	On computers with dongles the user now gets an error message if the try to set up a configuration for a local license server on another computer.
Internet License	When using internet license handling of allocated license seats are improved, so running MIKE applications keeps their license seats even if the process is paused.
Internet License	Improved detection of program being stopped when using internet license so that file with connection info gets removed when programs stopped.
Internet License	Timeout added for Internet requests, so requests is aborted after a period. This should prevent license request making MIKE applications unresponsible because of network interruptions on the internet
Internet License	The number given for licenses nearing expiry in the Internet License Portal no longer includes already expired licenses.
