Introduction

Welcome to FEFLOW 7.5 within MIKE 2022

In this Release Note, you will find information about new features of FEFLOW, and what you need to know in order to install and get started.

Groundwater projects are becoming more and more demanding - requiring modelling software with more sophisticated capabilities than ever before. FEFLOW provides best-in-class technology for groundwater flow, contaminant, groundwater age and heat-transport simulations. With its efficient user interface and its yet unmatched range of functionality, FEFLOW has become a standard in premium groundwater modelling over the last 35 years.

FEFLOW comes with a new conceptual modelling approach for creating and updating models faster than ever. The release introduces significant improvements in the numerical methods such as a new solver package PETSc (incl. GPU-accelerated preconditioner), updated version of SAMG solver and an extended formulation of the error norms and tolerance. The FEFLOW Python, IFM and Console comes with additional API and switches. In the FEFLOW GUI, we have now new ways of operating with many selections.

FePEST presents new integration to the PEST++ package for allowing a new method for model calibration and uncertainty quantification in one run (PEST++ Iterative Ensemble Smoother). Parallelization in the FePEST context is improved with a new run manager.

System requirements

Operating systems

Fully supported Windows operating systems *	Windows 10 Pro, version 21H1 (64 bit) Windows Server 2016 Standard, version 1607 Windows Server 2019 Standard, version 1809
Fully supported Linux operating systems *	Ubuntu 20.4 LTS (Debian) CentOS 7 (Platform el7): CentOS Linux 7 (Core) RHEL Fedora CentOS 8 (Platform el8): CentOS Stream 8 RHEL Fedora
Non-supported but partially tested operating systems **	Windows 11 Pro, version 21H2 (64 bit) Windows Server 2022, version 21H2

* Fully supported operating systems are systems that have been tested in accordance with MIKE's Quality Assurance procedures and where warranty and software maintenance agreement conditions apply.

MIKE Powered by DHI

** Non-supported but partially tested operating systems are systems, which are not officially supported by the MIKE software products. These operating systems have only undergone very limited testing for the purpose of MIKE software, but the software and key features are likely to work. Installation of MIKE software on a non-supported operating system is done so at the user's own risk. The MIKE software warranty and software maintenance agreement conditions do not apply for unsupported operating systems and DHI is under no obligation to provide assistance or troubleshooting for cases where the software is being used on a non-supported operating system.

Please note that single user installations are not allowed on server operating systems. Also, when running a fully supported operating system as a 'guest operating system' on a virtualization platform, it is automatically downgraded to a non-supported operating system under the conditions provided above.

Minimum hardware/software requirements

Processor	compatible with x64 instruction set, 2.2 GHz or higher
Memory (RAM)	4 GB or higher *
Storage	64 GB or higher *
Display	resolution 1024 x 720 (High-Definition) or higher, 24-bit color (true color)
Graphics adapter	≥ 2 GB memory, ≥ 24-bit color, Shader version ≥ 1.30, minimum hardware accelerated OpenGL ≥ 2.0 / recommended hardware accelerated OpenGL ≥ 3.0 with fully supported Windows drivers
Software requirements	Microsoft .NET Framework 5.0 or later

* The actual required amount of memory and disk space depend on the usage (application, model setup, size of data files etc.)

Operating systems

Fully supported Windows operating systems *	Windows 10 Pro, version 20H2/21H1 (64 bit) Windows Server 2016 Standard Windows Server 2019 Standard
Fully supported Linux operating systems *	Ubuntu 20.4 LTS (Debian) CentOS 7 (Platform el7): CentOS Linux 7 (Core) RHEL Fedora CentOS 8 (Platform el8): CentOS Stream 8 RHEL Fedora
Non-supported but partially tested operating systems **	Windows 11 Pro, version 21H2 (64 bit)

* Fully supported operating systems are systems that have been tested in accordance with MIKE's Quality Assurance procedures and where warranty and software maintenance agreement conditions apply.

** Non-supported but partially tested operating systems are systems, which are not officially supported by the MIKE software products. These operating systems have only undergone very limited testing for the purpose of MIKE software, but the software and key features are likely to work. Installation of MIKE software on a non-supported operating system is done so at the user's own risk. The MIKE software warranty and software maintenance agreement conditions do not apply for unsupported operating systems and DHI is under no obligation to provide assistance or troubleshooting for cases where the software is being used on a non-supported operating system.

Please note that single user installations are not allowed on server operating systems. Also, when running a fully supported operating system as a 'guest operating system' on a virtualization platform, it is automatically downgraded to a non-supported operating system under the conditions provided above.

Minimum hardware/software requirements

Processor	x64, 2.2 GHz (or higher)
Memory (RAM)	4 GB (or higher)
Hard disk	5 GB (or higher)
Monitor	Full HD (1920 x 1080)
Graphics adapter	≥ 2 GB memory, ≥ 24-bit color, Shader version ≥ 1.30, minimum hardware accelerated OpenGL ≥ 2.0 / recommended hardware accelerated OpenGL ≥ 3.0 with fully supported Windows drivers
File system	NTFS
Software requirements	Microsoft .NET Framework 5.0 or later

Installation

[top](#)

To install FEFLOW, please go to the 'windows' folder inside the 'FEFLOW' product folder and execute the 'start.exe' file either on the MIKE 2021 USB or from the downloaded, un-zipped installation files. Press the 'Install' button to begin installation.

To start the FEFLOW installation, please click on 'FEFLOW Program Files'. It is recommended to allow the setup program to check for the latest patch on the MIKE Powered by DHI website to avoid any known and already fixed bugs.

All necessary FEFLOW files and folders will be installed on your PC. Additionally, a FEFLOW entry in the Start menu is created, containing links to FEFLOW itself and some supporting programs

License file and dongle

Please Note that when using the local or network license option, which require a license file and a dongle, then

- the DHI License Manager must installed separately.
- all licensed applications included in MIKE 2022 require a 2022 version of the DHI License Manager.
- a new license file format (file extension dhilic2) has been introduced with MIKE 2022 and these license files can only be used together with a DHI License Manager 2022.

To use FEFLOW software in licensed mode, please refer to the DHI License Manager Release Notes. ([License Manager Release Notes](#)).

Product invocation

To start FEFLOW, double click on the FEFLOW 7.5 icon on your desktop or launch FEFLOW from the Windows Start menu and select the program you would like to start. Typically, this will be 'FEFLOW Standard (64-bit)' or the free viewer 'FEFLOW Viewer (64-bit)'.

Starting FEFLOW without a valid license, it is recommended to switch to demo mode via Tools - License Setup in the main menu. This mode is indicated by the word 'DEMO' in the header of the FEFLOW application window. Running in demo mode, file loading and saving is limited to 2500 nodes.

Support

For general support, please refer to our [FAQ](#).

If you experience any difficulties, or if you have questions, please contact our Customer Care team by e-mail or phone:

Customer Success

DHI A/S
Agern Allé 5
DK-2970 Hørsholm
Denmark

mike@dhigroup.com
Tel: +45 4516 9333

You can also contact your local Customer Care team for support in your local language. You can find the list [here](#).

New features and fixed issues

[top](#)

Release 2022 (FEFLOW 7.5.0)

Every new release of FEFLOW consists of new modules, new features and/or corrections to problems or significant inconsistencies discovered in previous releases. Please find below short descriptions of the most significant news.

New features

Module/type	New feature
FEFLOW / Usability	New conceptual modelling approach for defining material information before generating a mesh.
FEFLOW / Usability	Support of material regions and parameter lookup tables for fast model updates.
FEFLOW / Usability	Possibility to group (ungroup) selections, sort selections and do operations of content/budget analysis at the group level.
FEFLOW / Numeric	New SAMG version 2020 for enhanced memory management and improved parallelization.
FEFLOW / Numeric	New solver package PETSc including Krylov-based methods, AMG solver and GPU-accelerated preconditioning.
FEFLOW / Numeric	Separate error norm type and tolerance per problem class (flow, mass and heat).
FEFLOW / Usability	Access a new input unit (Energy demand) for BHE configuration.
FEFLOW / Hydrodynamics	Custom Feature "Hydrodynamics" for analyzing the interaction between surface water and groundwater (coupling FEFLOW and MIKE 1D engines).

MIKE Powered by DHI

FEFLOW / Usability	Import of DFS2 files (e.g., MIKE SHE groundwater recharge or other) directly in FEFLOW.
FEFLOW / Usability	New data regionalization method "Area-weighted Projection".
FEFLOW / FePEST	Support of the PEST++ package (including IES and GLM methods).
FEFLOW / FePEST	Support of new parallelization manager PANTHER.
FEFLOW / IFM	Access to more than 20 new APIs to support the new conceptual modelling approach.
FEFLOW / Python	New multi-threading control for FEFLOW Python runs.
FEFLOW / Console	New option to perform a switch in the equation solver in the FEFLOW console.
